

Protecting Our Water System and A Regulatory Requirement for Water Service

Typical Residential Customer's Water Line Components

The illustration is typical of the plumbing system required by MAWA. If you have any questions about the required components, we suggest that you contact your plumber or MAWA.

Residential Meter Replacement

MAWA replaces your water meter every 15 years. Before MAWA can install your meter, we require a working shut-off valve before and after the meter and a dual check backflow device. If your water system does not meet our requirements, you will be given 30 days to bring your water service up to code or your water service will be terminated.

1. Know where your shut-off valves are in case you have a leak to avoid a costly service call.
2. Install a dual check backflow device to protect your water service.
3. Give us or your plumber a call if you have any questions.
4. Check out our Backflow Policy at www.mawa.us
